

Hello Bob,

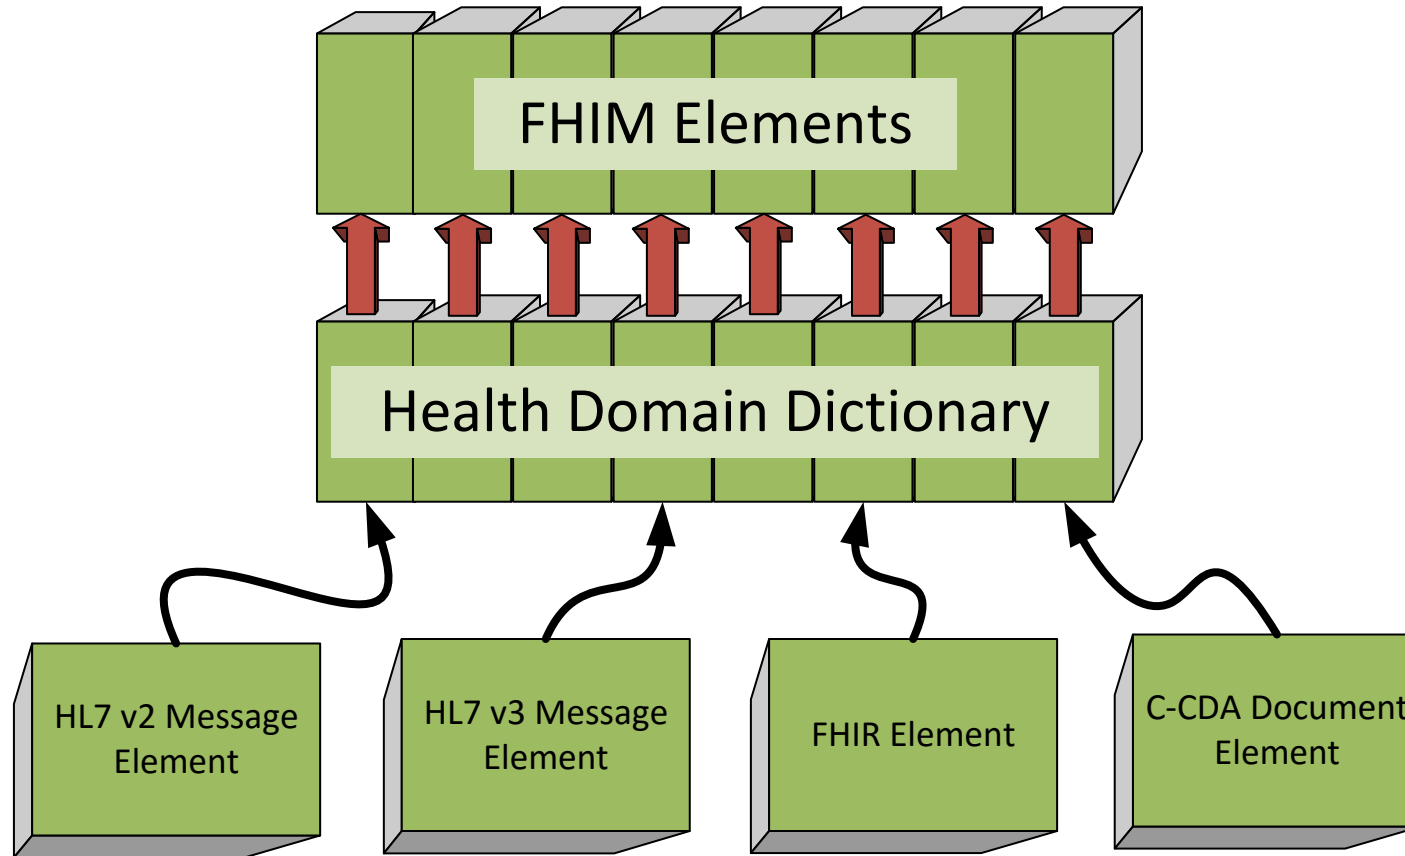

Please review the “FHIM Complete” tab which is a revision of your work and “MDMI as Desired” which is an interpretation of what we had discussed and let me know if you concur so I can share the final product with the FHIM team. Glad Galen was able to validate both as technically sound earlier today. I’ve cc’ed in Gail, John, Galen, and Mulikat so they have it as a resource should they have decide its useful. Please share any updates you have we can pass on.

Kindest Regards,
Alberto

FHIM: A Complete Interoperability Solution

Desired MDMI Implementation

Desired Rules

- One authoritative Health Domain Dictionary
- All Health Domain Dictionary indices have a one to one correspondence to a single element in the FHIM
- All HIT interoperability document/bundle/message elements have a one to one correspondence to a single Health Domain Dictionary index

Results

- Ease of mapping elements from one health interoperability document/bundle/message to any other
- A single Health Domain Dictionary that grows in usefulness with the mapping of the elements from each message/bundle/document mapped
